Summary

Senior Software Engineer with 3+ years building scalable distributed systems, AI infrastructure, enterprise GenAI platforms, and cloud-native microservices. Expertise in Java, Spring Boot, AWS, LLMOps, RAG, API Security, Kubernetes, and high-scale backend architecture serving global financial platforms. Proven success in architecting model serving, prompt orchestration, and observability frameworks.

Technical Skills

Languages: Java, Python, TypeScript, SQL, JavaScript, Bash

Backend: Spring Boot, Spring Security, Hibernate, FastAPI, Node.js, gRPC, REST APIs, OpenAPI, Swagger

AI/LLMs: LLMOps, AI Agents, Prompt Engineering, Prompt Orchestration, MCP (Model Context Protocol), Model Serving, OpenAI, Anthropic Claude, Bedrock

Cloud & DevOps: AWS (ECS, SQS, SNS, Kinesis, API Gateway), Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, CI/CD, Linux

Databases & Caching: PostgreSQL, Redis, Elasticsearch, OpenSearch, ChromaDB, MongoDB, Vector Search, Semantic Search

Architecture: Distributed Systems, High Availability, Scalable Backend, API Security, Event-Driven Architecture (Kafka), OAuth2, JWT, RBAC, Observability (Prometheus, Grafana, OpenTelemetry)

Quality Assurance: Unit Testing, JUnit, Mockito, SonarQube, Checkmarx

Experience

Visa Inc.

May 2025 – Present

Senior Software Engineer

Bangalore, India

- Architected GenAI security middleware for LLM RAG workflows across 300+ applications, utilizing **LLMOps** pipelines for PII anonymization and **Prompt Orchestration**.
- Optimized **AI Gateway** latency to <300ms using **Distributed Caching** (Redis) and AWS Kinesis, achieving 5x throughput for 50k+ daily requests.
- Designed **Agentic AI** infrastructure using **MCP** servers and RBAC, securely managing 20+ microservice integrations for global banking operations.
- Implemented **Observability** frameworks using OpenTelemetry and Grafana to ensure 99.99% reliability across production AI clusters.
- Streamlined CI/CD deployment frequency by 20% via automated Checkmarx/SonarQube scans and Terraform-based infrastructure as code.

Visa Inc.

June 2023 – April 2025

Software Engineer

Bangalore, India

- Engineered **Scalable Backend** services for merchant risk, facilitating onboarding for 1,000+ financial institutions.
- Architected event-driven async reporting using Kafka and Spring Batch, reducing manual compliance overhead by 20 hours/week.
- Modernized legacy frontend to TypeScript/Angular; improved rendering performance by 35% with high-availability microservice architecture.
- Enhanced **API Security** using OAuth2/JWT and robust JUnit/Mockito testing, reducing production vulnerabilities by 40%.

Visa Inc.

May 2022 – June 2022

Software Engineering Intern

Bangalore, India

- Developed graph-based visualization tools for RBAC workflows, improving audit transparency for 30+ financial BIN forms.
- Built a centralized Node.js validation engine, reducing manual database entry errors by 90% through automated regex constraints.

Projects

Autonomous Multi-Agent AI Platform

github.com/ishan0jain/stock_agent

- Designed an Agentic AI platform using FastAPI, LangChain, MCP, ChromaDB, RAG, **Vector Search**, and autonomous agents supporting enterprise financial retrieval.
- Deployed ensemble TensorFlow models for market analysis, achieving high-accuracy predictions on 10+ years of historical market data.

Cloud IDE & Collaborative Sandbox

github.com/ishan0jain/cloud-ide

- Architected a **Scalable Backend** cloud IDE with WebSocket synchronization, supporting 100+ concurrent users with <50ms sync latency.
- Orchestrated isolated execution environments via Docker/Kubernetes on AWS, ensuring secure runtime isolation across multiple programming languages.

ItsApex E-Commerce Infrastructure

github.com/ishan0jain/ItsApex

- Developed 12+ microservices supporting a multi-tenant e-commerce marketplace, achieving 99.9% uptime during high-traffic simulated load tests.
- Engineered a SQL-driven registration engine, enabling real-time constraint updates without requiring redeployment.

Education

Bachelor of Technology in Electrical and Electronics Engineering,
National Institute of Technology, Warangal

2019 – 2023

Certifications

AWS Certified Developer – Associate
Agentic AI and RAG Specialization – IBM

Credly
Coursera
